

Problem 4

Write a program to subtract two numbers and print the result.

The number will be given as an array.

Use appropriate representation to store and compute the result.

Note: Testcases as generated such that the result will always be a positive number.

Input:

5 4 #Number of digits in the 1st and 2nd sequence

6

5

9

3

8

3

5

6

2

Ouput:

62376
